

Sl. No.	OPD No.	Name Age/sex	Diagnosis	Treatment
1.	50371	Shaurya Samrat 13 Yr/M	A 13-year-old pre-pubertal male patient was diagnosed as a case of skeletal class II pattern on account of orthognathic maxilla & retrognathic mandible with vertical growth pattern. Patient has dentoalveolar Angle's Class II molar relation on right side & half cusp class II on left side; canine & incisor relation can't be established. Patient has anterior open bite & has proclined upper and lower incisors. After evaluating case parameters, skeletal expansion with hyrax was planned. After 6 months of retention, posterior bite block was given with TAD for intrusion.	PRE-TREATMENT  MID-TREATMENT 
2.	105084	Ashik Kumar 11 Yr/ M	An 11-year-old male patient was diagnosed as a case of class II skeletal pattern on account of retrognathic mandible with horizontal growth pattern. Patient has half cusp class II molar relationship bilaterally, end-on canine relationship on right & left side and class II incisor relationship. Patient has an overjet of 10 mm & overbite of 6 mm. Patient has proclined & forwardly placed upper & lower incisors. After evaluating the case parameters, a two-phase treatment was planned. 1 st phase includes functional appliance (Twin-Block), 2 nd phase includes fixed orthodontic therapy with extraction line of treatment.
